3.6 Auc-Tex Key Bindings

These are simple 2 key expansions for some very commonly used LaTeX elements:

<code>`^</code>	Expands To	<code>\Hat{<+>}<+></code>
<code>`_</code>	expands to	<code>\bar{<+>}<+></code>
<code>`6</code>	expands to	<code>\partial</code>
<code>`8</code>	expands to	<code>\infty</code>
<code>`/</code>	expands to	<code>\frac{<+>}{<+>}<+></code>
<code>`%</code>	expands to	<code>\frac{<+>}{<+>}<+></code>
<code>`@</code>	expands to	<code>\circ</code>
<code>`0</code>	expands to	<code>\^{\circ}</code>
<code>`=</code>	expands to	<code>\equiv</code>
<code>`\</code>	expands to	<code>\setminus</code>
<code>`.</code>	expands to	<code>\cdot</code>
<code>`*</code>	expands to	<code>\times</code>
<code>`&</code>	expands to	<code>\wedge</code>
<code>`-</code>	expands to	<code>\bigcap</code>
<code>`+</code>	expands to	<code>\bigcup</code>
<code>`(</code>	expands to	<code>\subset</code>
<code>`)</code>	expands to	<code>\supset</code>
<code>`<</code>	expands to	<code>\leq</code>
<code>`></code>	expands to	<code>\geq</code>
<code>`,</code>	expands to	<code>\nonumber</code>
<code>`~</code>	expands to	<code>\tilde{<+>}<+></code>
<code>`;</code>	expands to	<code>\dot{<+>}<+></code>
<code>`:</code>	expands to	<code>\ddot{<+>}<+></code>
<code>`2</code>	expands to	<code>\sqrt{<+>}<+></code>
<code>` </code>	expands to	<code>\Big </code>
<code>`I</code>	expands to	<code>\int_{<+>}^{\wedge{<+>}}<+></code>

(again, notice the convenient place-holders)

In addition the visual mode macros are provided:

<code>`(</code>	encloses selection in <code>\left(</code> and <code>\right)</code>
<code>`[</code>	encloses selection in <code>\left[</code> and <code>\right]</code>
<code>`{</code>	encloses selection in <code>\left\{</code> and <code>\right\}</code>
<code>`\$</code>	encloses selection in <code>\$\$</code> or <code>\[\]</code> depending on characterwise or linewise selection
